

You Dedicate Yourself to Pediatrics...

Congratulations! You have discovered Office Practicum, a robust pediatric Electronic Medical Records (EMR) and Practice Management System (PMS).

Electronic patient chart

What is Office Practicum?

Office Practicum (OP) is a one-stop, complete software solution for your pediatric practice, and the only software "office-suite" that can offer every solution to the pediatrician; conceived, tailored, engineered, and solely dedicated to serving the unique needs of pediatrics.

Why Office Practicum?

The Office Practicum system is an entire software suite – a one-stop source for all your practice management needs. There is no need to buy additional software or pay for 'add-on' modules. Each inclusive module and feature was designed originally and exclusively for use in pediatrics and not later 'modified' to fit.

Office Practicum is designed to compliment the workflow of the pediatric practice, to minimize duplication of effort, streamline productivity, and to enable the pediatrician to maintain a paperless office while easily handling the day-to-day demands of their business.

Who does Office Practicum work for?

In a word, Office Practicum works for – **you!**

Through 10-years of development and input from practicing pediatricians and pediatricians on the development team, OP has been uniquely and specifically engineered to provide solutions to busy pediatric practices.

The profiles of practices using Office Practicum all across the United States range from large, multiple provider, large support-staff, multiple location offices, to solo pediatricians starting their own practice with no support-staff.

You dedicate yourself to pediatrics. When you evaluate an EMR/practice management system, an important characteristic is the dedication and commitment of the EMR company, and the compatibility of the system to pediatrics. We at Visual Data, LLC can measure our commitment to pediatrics through 10+ years of service and program development and our many satisfied and successful clients across the United States.

...Shouldn't Your **EMR?**

OFFICE PRACTICUM[®]
PEDIATRIC SOFTWARE

Office Practicum's many unique features enable your day to be **less labor-intensive**, and more **patient-attentive**.

The Electronic Medical Record

The electronic patient chart displays pertinent patient information, on-going/current problems, medications, allergies, alerts for due or past-due vaccines, date of most recent visit and examination, links to neonatal, developmental and past medical history, a staff and provider to-do list, patient insurance, and color patient photographs.

School and Camp Forms

School/camp forms print with color photograph. Scan in local/regional forms and set all information fields to be filled automatically as the system retrieves the patient information.

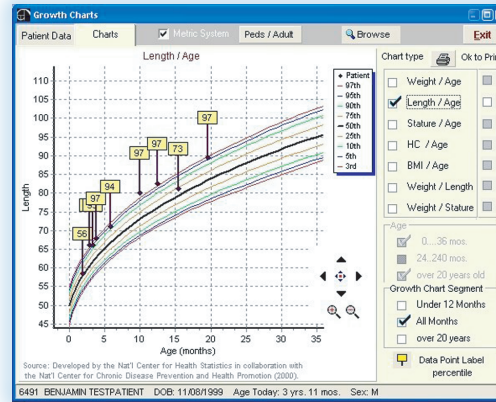

School / Camp Form

Medications

OP automatically stores a record of medications in a concise medication chronology. ICD-9's (and CPT codes) can be referenced from a current list stored within the system, applied to notes with the click of a button, and entered into the super bill automatically. OP has an extensive library of medications with their recommended doses and a pediatric-dose calculator. Prescriptions can be written and printed with practice name and provider signature.

Growth Charts

OP automatically graphs all measurements; BMI, length/age, weight/age, HC/age, weight/length, weight/stature, on colorful, descriptive charts.

Electronic growth chart

Immunization Tracking

OP's unique algorithm, *VacLogic* forecasts upcoming vaccinations, reminds and alerts of overdue vaccinations, and calculates the provision of multiple vaccines. OP can also create a detailed report of the immunization history, displaying each vaccination in chronological order. Lot numbers and doses are recorded, updating your vaccine inventory and creating an inventory report. OP has various automated VFC (Vaccines for Children) reports and carries out various kinds of analysis reports.

Document Scanning and Management

OP is capable of storing vast amounts of scanned documents. Management is made simple by categorizing and linking documents, such as referral letters, diagnostic test results, and reports to the patient chart.

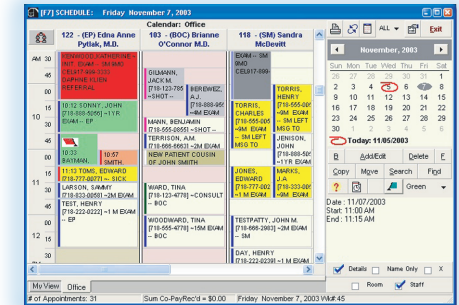

Report and Questionnaire Generator

The Office Practicum system allows provider and staff to create a report on virtually any aspect of the practice.

Scheduling

The OP schedule displays multiple provider's days simultaneously and divides the office into a 'room view'. Through color-coding providers and staff can be informed of the patient's status and whereabouts though out the office.

The schedule also highlights the patient's outstanding balances, on-going problems, and due or past-due vaccines.

Schedule

Message Center

Communicate and share information privately and discreetly through instant-message and inter-office email. Phone calls and messages can be logged, prioritized and flagged as 'action required', and recorded as 'read' or 'action completed', enabling providers and staff to perform 'phone triage' and document call-backs. Connect remotely to review messages, access all the patient information, and return phone calls from the comfort of home.

Diagnostic Test and Referral Tracking

The Office Practicum system flags referrals and diagnostic tests as pending or resolved, enabling staff and providers to stay abreast of the patient's status and/or activity outside of the practice.

Billing

Providers can easily enter the super bill into the system. Claims can be submitted electronically to numerous clearing houses, while a unique feature reconciles the schedule to verify that charges have been entered for each visit.
